Buch-Information

Autor(en): Tsukiboshi, Mitsuhiro

Titel: Autotransplantation of Teeth

Kurztext:

When performed under the proper indications, autotransplantation of teeth is a predictable technique that usually results in a good prognosis. This clinical atlas details the various procedures involved in autotransplantation. Readers are introduced to concepts such as wound healing associated with autotransplantation, clinical indications, surgical procedures, and prognoses for various situations, and they can see the outcome of specific cases over extended periods of time. An invaluable resource for oral surgeons, orthodontists, and pedodontists wanting to integrate this procedure into their practice. Includes contributions from Jens O. Andreasen, Yasuhiro Asai, Leif K. Bakland, and Thomas G. Wilson, Jr.

Contents:

- Introduction to Autotransplantation of Teeth
- Embryology and Anatomy of Teeth and Periodontal Tissues
- Wound Healing in Transplantation and Replantation
- Classification and Clinical Indications
- Sequence and Treatment Procedures
- Transplantation of Immature Teeth
- Prognosis
- History and Future Prospects
