Buch-Information

Autor(en): Khoury, Fouad / Antoun, Hadi / Missika, Patrick

Titel: Bone Augmentation in Oral Implantology

Kurztext:

This comprehensive and timely monograph covers all established methods for vertical and horizontal augmentation of the maxillary and mandibular alveoli in preparation for implant placement, including grafting with bone harvested from both intraoral and extraoral sites; guided bone regeneration techniques; use of biomaterials; and augmentation with distraction osteogenesis. Beginning with basic information about the biology of bone and bone transplantation, the authors present step-by-step documentation of each procedure, extensive case reports, underlying scientific concepts, and evidence from the scientific literature, all in exhaustive detail. Readers will gain understanding of the essential criteria for success along with potential complications and methods for remediating them. An invaluable resource for all practitioners involved in implant dentistry and oral and maxillofacial surgery.

Contents

Chapter 01. Bone Biology and Physiology
Chapter 02. Compromised Edentulous Sites: a Multi-Disciplinary Integrated Approach
Chapter 03. Medical Imaging and Bone Grafts
Chapter 04. Influence of the Implant Surface in Grafted Bone
Chapter 05. Bone Augmentation and Soft Tissue Management
Chapter 06. Mandibular Bone Block Grafts
Chapter 07. Bone Grafts Taken from the Calvarium
Chapter 08. Tibial Bone Harvesting
Chapter 09. Iliac Crest Grafts for Reconstruction of Severe Jawbone Atrophy
Chapter 10. Tissue Regeneration by Alveolar Callus Distraction
Chapter 11. Pre- and Peri-Implant Guided Bone Regeneration
Chapter 12. Crestal Sinus Floor Elevation
Chapter 13. Bone Substitutes
Chapter 14. Growth Factors and Bone Morphogenetic Proteins
Chapter 15. Interim Implants in Extensive Bone Augmentation Procedures
