Buch-Information

Hrsg.: Brånemark, Per-Ingvar

Titel: The Brånemark Novum Protocol for Same-Day Teeth

Untertitel: A Global Perspective

Kurztext:
This book introduces Brånemark Novum, an essentially new concept in the treatment of edentulousness. Novum represents a refinement and simplification of the Brånemark Classic protocol in that all surgical and prosthetic procedures can be completed in just 6 to 8 hours, thus giving patients a third dentition in less than 1 day. Moreover, this significantly reduced treatment time makes the procedure affordable for more of the patients who can benefit from it. The clinical cases presented in this book illustrate that the identical prefabricated implant components, templates, and frameworks of the Novum system have been used around the world in the successful treatment of patients of different ages and bone anatomies.
